

Select the perfect match for your spill control needs from our carefully developed and clearly described family of absorbents, or call our friendly team on **0800 193 0161** to find out more.

Essential Range

Our Essential range is a smaller, yet focussed range of just absorbent Pads and Rolls offering very competitive pricing to help you manage your everyday spills for less. Essential Pads & Rolls are available for Maintenance, Oil and Chemical spills and are perforated for ease of use and to minimise waste. Our Essential range of absorbents have a bonded finish (unlike other budget absorbents) which reduces linting and adds strength. Choose from 9 products for a low-cost, no-nonsense proposition you can rely on.

PremierPlus Range

Our Premier Plus Range is a focussed range of heavy-weight Pads and Rolls with our highest wet-strength and absorbency rates. Where Pads and Rolls are used right up to their full saturation point, our Premier Plus Absorbents continue to demonstrate the same great value as our Premier and Essential products. Bonded with a fine fibre finish, our Premier Plus Pads and Rolls feature super anti-linting properties and improved grip on tiled and painted floors. Choose from 34 products in Pad & Roll formats for General, Chemical and Oil spills.

Premier Range

Our Premier Range of absorbents comprises over 50 products including Absorbent Pads, Rolls, Socks, Pillows and Booms. It's the complete range and it performs too! Manufactured using a heavier weight material and delivering up to 40% more absorbency than our Essential Range. Our Premier Absorbents combine a high-loft construction to boost absorbency and Pads and Rolls are bonded and perforated for excellent wear resistance and economical use. Premier Range Absorbents are also used across our extensive range of Spill Kits.

EVO Recycled, Sustainable Range

A sustainable range of general Absorbent Pads, Rolls, Socks and Pillows manufactured in the UK from 85% recycled cotton fibre. Re-using a recycled, natural material provides a low-carbon, environmentally aware choice for the spill absorbent buyer. With typical absorbency at 1.3 litres per 50 x 40cm pad, do the maths and find a solid business case that doesn't cost the earth. You'll also see EVO Recycled Absorbents used in a selection of our Spill Kits too.
